

QUALIFY THE EARTHQUAKE BEHAVIOUR OF EQUIPMENT

A comprehensive range of services combining simulation and seismic tests

Your expectations

You would like to:

Characterise, qualify or enhance the reliability of the earthquake behaviour of structures and equipment via testing or simulation

Validate your studies or your design calculations

Our solutions

Cetim offers you:

tests on bi-axial shake table designed to perform: stress accelerations up to 5 g, tests on sets weighing up to 2,000 kg and multi-physical measurements, in accordance with the standards and specifications in force earthquake **design calculations** for structures, industrial equipment and pressure equipment covered by the codes, standards and specifications in force

advice and expertise to improve the performance of your structures and equipment

Your benefits

Cetim provides you with:

A multi-disciplinary team with a project manager who is an expert in the field

A calculation / test approach

Recognised expertise in the field of earthquakes
