

MACHINERY SAFETY (CE MARKING)

Turn legal constraints into a competitive asset!

Your expectations

You want to:

- meet regulatory constraints about machine safety in a pragmatic manner and without penalizing your company's competitiveness
- turn regulatory constraints into innovation levers which will become competitive assets
- address new markets by considering the regulations and standards constraints in their countries

Our solutions

- in collaboration with your staff, we define adapted tools and methods to fully take your duties into account
- we validate your design choices - mechanical security functions or automatisms - and find with you various innovative solutions to arising problems
- we integrate ergonomics when designing your machines
- we help you market your products: administrative procedures, documents to submit...

Your benefits

Cetim is an active member of various bodies defining safety standards in France and in foreign countries through its network of partners. You thus benefit from the expertise of a key player.

- Cetim's guarantee is a strong argument for the compliance of your design among customers, companies or control authorities
- you control responsibilities and costs related to regulatory constraints (risk analysis, use instructions, technical files...)
- machine security functions are adequate and well defined, innovations can be promoted
- easier machine acceptance
