

SUPPORT FOR SELECTING MATERIALS FOR PRESSURE EQUIPMENT

Use Cetim skills to take immediately the right decision

Your expectations

- quickly choose and use a material for pressure equipment manufacturing
- comply with current construction codes and standards, in particular the DESP 97/23/CE European regulation
- simplify the use of the chosen material for manufacturing pressure equipment designed for different service conditions

Our solutions

In compliance with current regulations:

- according to your specifications constraints, Cetim helps you identify the best fitted material
- you get expert advice to know the impact of your manufacturing processes on the mechanical properties of the selected material
- you receive European certifications for materials according to DESP (Cetim is a certified organization for this activity)

Your benefits

- As a neutral and independent technical center, Cetim has contributed for many years in standardization committees and guarantees you a high level expert service
- With Cetim, you benefit from a multidisciplinary approach, with, in addition to the material selection service: advanced testing and characterization means to guarantee the properties of the chosen material and a comprehensive knowledge of manufacturing processes for pressure equipment
