

SIMULATION OF TREATMENT PROCESSES

Optimize your thermal and surface treatment costs thanks to simulation

Your expectations

In order to answer your customers' needs, you have to:

- lower industrialization costs by reducing the number of steps and adjustments, limiting the volume of material used and increasing tool life
- reduce your development and industrialization time as well as the time required to reach the expected production rate
- quickly position your company towards new consultations and reduce risks

Our solutions

Our experts in thermal treatments help you simulate your process:

- surface treatment process optimization to quickly get the best geometrical solution and coating thickness
- part design optimization to simplify manufacturing

Their recommendations help you choose and validate a manufacturing process.

Your benefits

Cetim offers you

- The whole effectiveness of a simulation tool without having to buy it, to organize trainings or to engage running costs for the new software
- by avoiding inappropriate investment choices, you reduce your risks
- you save from 10 to 40% in material supply costs
