

CHARACTERIZATION OF PRESSURE EQUIPMENT AND ACCESSORIES

Rely on an expert in pressure equipment for your studies

Your expectations

As a pressure equipment designer or user, you want to:

- validate the design of pressure-submitted accessories or components
- qualify products or suppliers in order to be supported when making a decision

Our solutions

Cetim designs, implements and analyses well defined tests taking into account every constraint and need:

- instrumentation and realization of measurements on pressure equipment (deformation, displacement, expansion...)
- pressure, temperature, artificial ageing, cycling tests...
- hydrostatic and pressure resistance regulatory tests (DES, P 97/23/CE...)
- our experts help you with specialized testing facilities: pressure tests up to 6000 bars, static or dynamics tests, large dimension bursting test facilities

Your benefits

- Cetim is an independent and renowned technical center which benefits for a 40-year experience in pressure equipment
- multidisciplinary skills in pressure vessels: materials, design, simulation, pressure tests, instrumentation, regulation
- important means allow a large range of tests to answer every issues
